Dear Madam,
Dear Sir,

By means of this letter I would like to show my interest in pursuing the 'Digital Transformation Consultant' position at PwC. I am a 22-year old Business Engineer at the Solvay Business School of the Vrije Universiteit Brussel. I am graduating in June 2018, which is why I would like to express my enthusiasm towards your company.

During the last couple of years, I have already had the opportunity to gather some experience and as such have had the chance to get a taste of various business departments and company cultures. This wide range of short-term experiences has given me a good idea of the direction in which I would like to grow from a career point of view. The choice to graduate in the 'Business and Technology' specialization within my Business Engineering studies has been empowered by these experiences. Technology has always attracted my attention because of its continuous innovative nature, which delivers a challenging environment that enables an ongoing learning experience and stimulates an eagerness to learn on the job. I have also learned how important it is to feel a genuine fit with the organisation I work for.

After the Kick-Off event and the corporate lecture at the VUB, I feel that PwC can bring me the motivation and environment needed to develop my skills and engage them to deliver value to the clients you serve. The continuous learning environment that is being provided is what I am seeking. Moreover, looking at PwC's core values, I believe I have the appropriate strengths and capabilities to add to your team. A sociable personality and always looking forward to meeting and engaging with new people, helps me to work in team and learn from others. My solution-oriented creativity and communication skills, combined with my structured way of thinking and analytical mind are all assets that are invaluable in a client-oriented environment.

One of my previous internship supervisors said that "passionate people have the energy to deliver". I would like to get the opportunity to show PwC that I can actually put this into practice, challenging myself to push further beyond the set limits and as such help PwC to make a difference.

I look forward to further elaborating on my motivation and competences during an interview.

Yours sincerely,

Michael Heymans
